

DIAMETER TAPES

The diameter of a circular object, like a tree or a pipe, is easily measured using a Keson diameter tape. The tape is calibrated in units of 3.14(pi) inches. The tape is actually measuring the tree or pipe's circumference, but the units on the tape are adjusted by pi enabling you to get a diameter by wrapping this tape around a circular object.

Our PD618 has a stainless steel case which features a reflective surface and textured rubber grip to keep the tape from slipping. Our D18646 features the same blade in a plastic case.

POCKET RODS

This 6-1/2 foot vertical-reading leveling rod or grading rod is packed in a compact like a tape measure. It's ideal for checking a grade without having to carry a full-size rod. Great for foundation work, grading, swimming pools and construction photo records. Easy-to-read numbers are printed on both sides.

FEATURES

- Built-in target on 2 sides.
- Nylon coated facing not affected by moisture.
- Non-glare surface.
- Convenient surveyors pole.
- Heavy-duty end hook.

"Markings are clearly visible for photographing. I use it for appraisal work for damaged vehicles. No other product can be seen clearly in pictures while capturing the object behind it."
—Damage Appraiser, David
